EXPERIENCE

Software Engineer

January 2025 – Present

Nagarro

Gurugram

- Engineering **Phoenix OS** as part of the core team — an agentic spec-driven SDLC framework where **24 specialized agents** read and write against a **126-file memory layer** to turn a non-deterministic AI coding assistant into a **deterministic delivery system**, tool-agnostic across Claude Code, Copilot, Codex, and Cursor.
- Implemented Phoenix's "**Explicit via Abstraction**" model — hard-coded decision rules drive deterministic behavior, executing consistently across **GitHub/GitLab/Azure DevOps** and **Node/Python/Java** stacks.
- Driving **AI-SDLC adoption** across engineering teams — enabling teams to adopt Phoenix OS by extending its **memory layer** and customizing **agent flows** to their workflows, delivering **faster, cheaper** releases.
- Cut **agent token consumption** by **~20%** across Phoenix OS through **best-practice enforcement** and **per-agent context-window optimization**, reducing per-run cost on the framework.
- Developed a **Figma-to-Code pipeline** over **MCP** — extracting design tokens for cross-screen consistency and generating **React components** with **codebase-aware reuse** at **95% accuracy**.
- Designed a **DevOps orchestration flow** that one-shot-scaffolds an **18-file CI + DevSecOps pipeline** — GitHub Actions workflows, security scanning (**Gitleaks, SonarQube, Snyk**), and git hooks — with **PR-gated triggers**.

Full Stack Intern

August 2024 – October 2024

TailorTalk

Remote

- Delivered new features and improved functionality and performance on the company's main website — running **Lighthouse audits** to boost site speed and implementing **SEO** improvements for search visibility and reach.

PROJECTS

TaskForge | *Spring Boot 3.5.3, Spring Security 6, Next.js 14, Docker*

[GitHub](#) | [Docs](#)

- Built a **self-hosted Jira-style tracker** with a **Spring Boot REST API** (18 endpoints, 6 controllers) secured by stateless **Spring Security 6 + JWT**, with **role-based authorization** (3 roles) enforced at the service layer.
- Engineered a **drag-and-drop Kanban** (@dnd-kit) with optimistic UI, **scheduled daily email reminders** (Spring Scheduler + SMTP), and Promise.all() parallel fetching that removed an **N+1** query pattern.

BetterMind | *Next.js 14, MongoDB, OpenAI, JWT & 2FA*

[Live Demo](#) | [GitHub](#)

- Architected a **full-stack mental-health platform** on the **Next.js 14 App Router** with a custom **JWT auth layer** and **TOTP 2FA** — QR provisioning, recovery codes, and JWT issued only post-2FA.
- Added **AES encryption at rest**, a **rate-limiter factory** (per-route 429 throttling), **3-role RBAC** and a client-side **Guest Mode** that gates every write so the database cannot receive demo data.

Cryptonite | *Next.js 14, React 18, CoinGecko API, Recharts*

[Live Demo](#) | [GitHub](#)

- Created a **PWA crypto-trading simulator** with an **offline-capable wallet**, **live coin data**, and **CSV export**; proxied CoinGecko through **6 cached API routes** with a **4-layer fallback chain** to survive free-tier rate limits.
- Added **AbortController**-guarded multi-period charts, a **localStorage portfolio** with per-coin **live P&L** and cross-component wallet sync, and a zero-dependency **3D-tilt** glassmorphism UI.

ACHIEVEMENTS & CERTIFICATIONS

- Achieved **Specialist rank on CodeForces (top 15% globally)** with **1600+ rating**, solving **500+ algorithmic problems** with proven expertise in advanced data structures and algorithms.
- Selected for **Amazon ML Summer School'23** from over **60,000+ applicants nationwide** (~5% acceptance rate), covering probabilistic graphical models, reinforcement learning, and deep neural networks.

TECHNICAL SKILLS

AI / Agentic Systems: Model Context Protocol (MCP), Multi-Agent Orchestration, Agentic SDLC, Spec-Driven Development, LLM Tooling, Context-Window Optimization, Prompt Engineering, AI Adoption & Enablement

Languages & Foundations: Java, Python, JavaScript (ES6+), TypeScript, SQL, System Design, Microservices Architecture, Distributed Systems, DSA, Git, Linux, Bash Scripting

Frameworks & Libraries: Spring Boot, Spring Security, Hibernate, React.js, Next.js 14, Node.js, Express.js, Tailwind CSS

Cloud & DevOps: Amazon Web Services (AWS), Docker, Jenkins, SonarQube, Maven, GitHub Actions, CI/CD

Databases, APIs & Testing: MongoDB, MySQL, REST API, JWT, JUnit 5, Mockito, Jest, React Testing Library

EDUCATION

The NorthCap University, Gurugram

Bachelor of Technology in Computer Science

CGPA: 8.53

2021 – 2025
